

KG 571: Foundations of Programming

Assignment 1

Assignment Instructions

1. Install Python and IDE (VS Code):

- Install Python (version 3.10 or later) and Visual Studio Code.
- Verify installation by checking the Python version.
- Take a **screenshot** showing your Python version.

2. Write Pseudocode for the Following Problems:

- Write pseudocode to input a number and print its square.
- Write pseudocode to calculate the average of five numbers.
- Multiply Two Integers (take integer inputs from user).

3. Write and Execute Python Programs:

- Write Python code for all three problems.
- Run each program and capture screenshots of both **the code and its output**.

4. Submission:

- Combine pseudocode, Python code, and screenshots into **one Word or PDF file**.
- File name format: YourName_Assignment2.pdf
